TEN YEARS OF ELECTRONIC RUST PREVENTION WITH E.R.P.S

In April 2000 I wrote to E.R.P.S. to tell you of my research that satisfied me that your electronic rust prevention system would protect my new Holden Jackaroo 4WD against salt water corrosion. We were living at Orchid Beach, Fraser Island for 3-4 months each year and drove on the beach every day. After one year I was pleased with the protection obtained.

Now, ten years later, I am delighted to tell you that my Jackaroo has almost no corrosion anywhere. Only the mufflers and the exhaust tail pipe are showing some rust because heat burns off the coating of Xtra-Cote from their surfaces. I have not had to replace them except for one short section of the tail pipe.

Another bonus is the paint work protection. It has not dulled to the extent that I would normally have expected.

I do care for my vehicle and hose it down most days after being on the beach. I bring it in for periodic inspections and touch up of the under body where the crown of the sand tracks has abraded away the surface coating.

During the last two years I have cut back on my Fraser Island visits because it is difficult for me to walk on the beach. But I am delighted to have my 4WD in such good condition.

What a contrast is the protection E.R.P.S. has given this Jackaroo compared with the conventional bituminous coating applied to my previous Jackaroo. After only 4.5 years use I sold that rust bucket and suffered a considerable financial loss.
